- Customers who on-boards to AppViewX v2022.1.0 FP4.

## Text Conventions

The following text conventions are used in this document:

Convention	Description
<b>boldface</b>	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
<code>codeblock</code>	Indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

# Chapter 1: Feature Update

This release, version v2022.1.0 FP4, does not include any updates related to new features, enhancements, and software limitations. The focus of this release is solely on the component upgrades and security fixes. These updates ensure the system remains secure and up-to-date without introducing additional functionality or changes to the existing software.

**Note:** For all module's technical documentation, refer to [v2022.1.0\\_FP3](#).

The following is the summary of the implementations performed:

- Added validation for updating the master variable name via the API.
- Fixed broken access control allowing low-privilege users to delete scheduled jobs.
- Improved error handling to show generic messages instead of full paths.
- Upgraded JavaScript libraries
- Upgraded all third-party and Kubernetes components.

**Note:** The details of all third-party and Kubernetes components upgraded as a part of this release is referenced in the security advisory documentation.
