Preface

Revision History

Revision	Description	Date
1.0	AppViewX v2024.2.3.0 (SaaS) Release Notes	Jul 2025

About this Guide

This release notes guide provides a summary of new features, enhancements, bug fixes, known issues, and known limitations introduced in this release.

Intended Audience

Customers onboarding AppViewX v2024.2.3.0.

Third-Party Software Acknowledgments

This section serves as a placeholder to document the third-party components referenced in this guide, along with their associated trademark information.

Text Conventions

The following text conventions are used in this document:

Convention	Description
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
<code>codeblock</code>	Indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Chapter 1: New Features

This section describes the new features in AppViewX v2024.2.3.0 release.

Platform

Introduced AI Reports

AppViewX has introduced **AI Reports**, a new feature that leverages Natural Language Processing (NLP) to simplify certificate management reporting. This capability allows users to generate reports by entering queries in plain language, making advanced certificate data analysis accessible even to non-technical users.

Key highlights

- Supports natural language queries related to certificate infrastructure
- Offers pre-defined sample queries to cover common use cases
- Generates instant reports based on user input

Note:

The AI Reports feature is currently in Tech Preview and supports only certificate management reporting at this stage.

ADC+

Introduced support for external server backups

Device backups can now be uploaded to a user-configured external server, helping to significantly reduce the storage usage in the AppViewX database. The system retains only the most recent backups locally; users can configure the number of retained backups per device, (up to a maximum of 16).

Chapter 2: Enhancements

This section describes the new features in AppViewX v2024.2.3.0 release.

CERT+

Introduced endpoint enrollment for SAP ABAP and WebDispatcher devices using GlobalSign Atlas as the Certificate Authority enabling zero-touch certificate lifecycle management.

Chapter 3: Bug Fixes

This section describes the bug fixes in AppViewX v2024.2.3.0 release.

CERT+

- Resolved an issue where the **Associated Objects** field in the certificate collection was not accurately reflecting the actual application connectors linked to the certificate.
- Fixed an issue where us-west-2 was incorrectly used as the default region to fetch the S3 bucket region. The logic now uses the region selected by the user during onboarding.
- Fixed an issue where EC2 onboarding with certificate sync set to *Ignored* could get stuck in the *In Progress* state. The status will now correctly show as *Not Applicable* for such cases. This fix is specific to EC2 and does not apply to other services.
- Optimized AWS device push payload by removing unused and optional fields, reducing overall payload size and preventing unnecessary retries.

SSH+

- Resolved inconsistencies in the Key Instance Inventory export reports to ensure accurate and consistent data representation.
- Corrected issues in the Key Instance export workflow where the *Last Scan* and *Host Reachable* timestamps were displayed inaccurately.
- Resolved issue with IP range or subnet discovery batching.

Chapter 4: Known Issues

There are no known issues in the AppViewX v2024.2.3.0 release.

Chapter 5: Known Limitations

There are no known limitations in the AppViewX v2024.2.3.0 release.
