Revision History

Revision	Description	Date
1.0	AppViewX v2024.2.7.0 (On-prem) Release Notes	April 2026

About this Guide

This release notes describe new features, enhancements, known and fixed issues, and known limitations in the software.

Intended Audience

- Customers onboarding AppViewX v2024.2.7.0.

Third-Party Software Acknowledgments

This section serves as a placeholder to document the third-party components referenced in this guide, along with their associated trademark information.

Text Conventions

The following text conventions are used in this document:

Convention	Description
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
<code>codeblock</code>	Indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Chapter 1: New Features

There are no new features in software in this release.

Chapter 2: Enhancements

There are no enhancements in software in this release.

Chapter 3: Bug Fixes

This section describes the bug fixes in this release.

PKI

- Resolved an issue where certificates generated through the AppViewX Native PKI CA using the `sha256WithRSAEncryption` algorithm did not consistently include the required `NULL` parameter in the `AlgorithmIdentifier`. This could cause certificate import failures in environments that strictly enforce RFC4055. AppViewX now generates these certificates with consistent and standards-compliant encoding, improving interoperability for internally signed certificate deployments.

Chapter 4: Known Issues

There are no known issues in software in this release.

Chapter 5: Limitations

There are no limitations in software in this release.
